## COVID-19 Antigen

### COVID-19 Antigen

### NEGATIVE

A negative ~~test~~ result does not rule out the possibility of an infection with SARS-CoV-2. Serum or plasma samples from the early (pre-seroconversion) phase of illness can yield negative findings. Therefore, this test cannot be used to diagnose an acute infection. Testing with molecular diagnostic should be performed to evaluate for active infection in symptomatic individuals. It is not known at this time if the presence of antibodies to SARS-CoV-2 confers immunity to reinfection. False positive results for the test may occur due to cross-reactivity. The Siemens Covid-19 Total Antibody test was developed, and its performance characteristics determined by Siemens for the Vista 1500. The FDA has authorized this test for EUA.
